EDUCATION

University of Illinois Chicago | Chicago, IL

Bachelor of Arts in Computer Science | Expected May 2027

Relevant coursework: Data Structures & Algorithms, Software Design, Machine Organization, Programming Language Concepts

TECHNICAL SKILLS

Languages: Java, Go, C++, Python, C, SQL

Tools & technologies: Git, GitHub, Docker, Railway, JavaFX, MySQL, SQLite, REST APIs

Testing: Google Test (C++); unit tests for hash collisions, bounds checks, copy operations, and resizing

PROJECTS

Networked Checkers Application

Java, JavaFX, TCP Sockets | Apr 2026 | Team of 2

- Implemented the client and server code in a two-person pair-programming project; collaborated on wireframes and UML diagrams to plan the interface and application structure.
- Built a multithreaded socket server with player matchmaking, move relay, rematch requests, and disconnect handling for networked games.
- Created a JavaFX interface with move validation, chained captures, king promotion, in-game chat, and a single-player computer opponent.

GitHub Activity Bot

Go, REST APIs, Docker, Railway | Jun 2026

- Built a Go service that retrieves repository and commit activity from the GitHub REST API and emails daily summaries through Gmail SMTP.
- Separated API access, report formatting, email delivery, and scheduling into dedicated packages; scheduled reports for a configured daily send time.
- Deployed to Railway using a multi-stage Docker build with an Alpine runtime image containing the compiled application.

Hospital Database Design

SQL, MySQL, Relational Modeling | CS480 | Team of 3

- Defined 16 relations and their primary, composite, and foreign keys for a team database project covering patients, staff, treatments, room assignments, and billing.
- Created three SQL views for patient treatment, staff workload, and billing balances using joins, grouped subqueries, and aggregations; documented each view's purpose and use.

HACKATHON EXPERIENCE

Byteme - Student Productivity Platform

Sparkhacks, University of Illinois Chicago | Spring 2025

- Collaborated with a five-member team to design a student productivity platform with study tracking and peer collaboration; planned the architecture, database schema, and application workflows.
- Coordinated tasks and version control through Git and GitHub, and presented the project design and technical decisions to judges and peers.
